Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

- (Original) An isolated nucleic acid molecule comprising the nucleotide sequence of SEQ ID NO: 5 wherein said nucleic acid molecule is less than 1000 nucleotides in length.
- 2. (Original) The isolated nucleic acid molecule of claim 1, wherein said nucleic acid molecule is less than 800 nucleotides in length.
- 3. (Original) The isolated nucleic acid molecule of claim 1, wherein said nucleic acid molecule is less than 750 nucleotides in length.
- 4. (Original) The isolated nucleic acid molecule of claim 1, wherein said nucleic acid molecule is less than 600 nucleotides in length.
- 5. (Original) An isolated nucleic acid molecule consisting of the nucleotide sequence of SEQ ID NO:4 or fragment thereof.
- 6. (Original) An isolated nucleic acid molecule consisting of the nucleotide sequence of SEQ ID NO:5 or fragment thereof.
- 7. (Currently Amended) The isolated nucleic acid molecule of any one of claims 1-6 claim

 1, wherein said sequence regulates transcription of an operably linked nucleotide sequence of interest.
- 8. (Original) The isolated nucleic acid molecule of claim 7, wherein said sequence regulates transcription by inducing expression in response to a stimulus.
- 9. (Original) The isolated nucleic acid molecule of claim 8, wherein said stimulus is light or an environmental stress.

- 10. (Original) A isolated nucleic acid construct comprising, a promoter sequence comprising the nucleic acid sequence of SEQ ID NO: 4 or 5 or fragment thereof operably linked to a nucleotide sequence encoding a heterologous gene, wherein said heterologous gene encodes a protein of interest or fragment thereof.
- 11. (Original) The construct of claim 10, wherein said construct comprises at least two promoter sequences.
- 12. (Original) The construct of claim 11, further comprising a spacer sequence, wherein said spacer sequence operably links said promoter sequences.
- 13. (Original) The construct of claim 10, further comprising a nucleic acid encoding a selectable marker.
- 14. (Original) The construct of claim 10, further comprising a nucleic acid encoding a reporter gene.
- 15. (Original) The construct of claim 10, wherein said heterologous gene is capable of altering an agronomic trait.
- 16. (Original) The construct if claim 15, wherein said agronomic trait is disease resistance, herbicide resistance, environmental stress resistance, enhanced growth, or increased yield.
- 17. (Original) The construct of claim 10, wherein said heterologous gene is a plant gene.
- 18. (Original) The construct of claim 10, wherein said heterologous gene is a structural gene.
- 19. (Original) The construct of claim 18, wherein said structural gene is an enzyme, a transcriptional regulator, a chaperonin protein or a scaffolding protein.

- 20. (Original) The construct of claim 19, wherein said enzyme is farnesyl transferase alpha, farnesyl transferase beta or CaaX prenyl protease.
- 21. (Original) A isolated nucleic acid construct comprising, a promoter sequence comprising SEQ ID NO: 4 or 5 or fragment thereof operably linked to a non-translatable mRNA molecule of a gene encoding a protein of interest.
- 22. (Original) The construct of claim 21, wherein said non-translated mRNA molecule is an antisense nucleic acid, a hairpin RNA or a microRNA.
- 23. (Original) The construct of claim 21, further comprising a nucleic acid encoding a selectable marker.
- 24. (Original) The construct of claim 21, further comprising a nucleic acid encoding a reporter gene.
- 25. (Original) The construct of claim 21, wherein said gene is capable of altering an agronomic trait.
- 26. (Original) The construct if claim 25, wherein said agronomic trait is disease resistance, herbicide resistance, environmental stress resistance, enhanced growth or increased yield.
- 27. (Original) The construct of claim 21, wherein said gene is a plant gene.
- 28. (Original) The construct of claim 21, wherein said gene is a structural gene.
- 29. (Original) The construct of claim 28, wherein said structural gene is an enzyme, a transcriptional regulator, a chaperonin protein or a scaffolding protein.

- 30. (Original) The construct of claim 29, wherein said enzyme is farnesyl transferase alpha, farnesyl transferase beta or CaaX prenyl protease.
- 31. (Currently Amended) A vector comprising the nucleic acid molecule of any one of claims

 1-9 claim 1.
- 32. (Original) A cell comprising the vector of claim 31.
- 33. (Original) The cell of claim 32, wherein said cell is a plant cell.
- 34. (Original) The cell of claim 33, wherein said plant cell is monocotyledonous.
- 35. (Original) The cell of claim 33, wherein said plant cell is dicotyledonous.
- 36. (Currently Amended) A vector comprising the nucleic acid construct of any one of claims

 10-20 claim 10.
- 37. (Original) A cell comprising the vector of claim 36.
- 38. (Original) The cell of claim 37, wherein said cell is a plant cell.
- 39. (Original) The cell of claim 38, wherein said plant cell monocotyledonous.
- 40. (Original) The cell of claim 38, wherein said plant cell is dicotyledonous.
- 41. (Currently Amended) A vector comprising the nucleic acid construct of any one of claims 21-30 claim 21.
- 42. (Original) A cell comprising the vector of claim 41.
- 43. (Original) The cell of claim 42, wherein said cell is a plant cell.

- 44. (Original) The cell of claim 43, wherein said plant cell monocotyledonous.
- 45. (Original) The cell of claim 43, wherein said plant cell is dicotyledonous.
- 46. (Original) A method of producing a transgenic plant comprising introducing into a plant cell the vector of claim 36, to generate a transgenic cell and regenerating a transgenic plant from said transgenic cell, wherein said transgenic plant expresses said protein of interest.
- 47. (Original) The method of claim 46, wherein said expression is constitutive.
- 48. (Original) The method of claim 46, wherein said expression is inducible
- 49. (Original) The method of claim 46, wherein said plant cell is monocotyledonous.
- 50. (Original) The method of claim 46, wherein said plant cell is dicotyledonous.
- 51. (Original) A method of producing a transgenic plant comprising introducing into a plant cell the vector of claim 41, to generate a transgenic cell and regenerating a transgenic plant from said transgenic cell, wherein said transgenic plant expresses said protein of interest at a decreased level as compared to a wildtype plant
- 52. (Original) The method of claim 51, wherein said plant cell is monocotyledonous.
- 53. (Original) The method of claim 51, wherein said plant cell is dicotyledonous.
- 54. (Currently Amended) The transgenic plant produced by any one of the methods of claims 46-50 the method of claim 46.

- 55. (Original) The seed produced by the transgenic plant of claim 54, wherein said seed produces a plant that expresses said protein of interest.
- 56. (Currently Amended) The transgenic plant produced by any one of the methods of claims

 51-53 the method of claim 51.
- 57. (Original) The seed produced by the transgenic plant of claim 56, wherein said seed produces a plant that expresses said protein of interest at a decreased level as compared to a wildtype plant.
- 58. (Currently Amended) A method of expressing a heterologous protein comprising introducing to a cell the construct of any one of claims 10-20 of claim 10 and expressing said heterologous protein in said cell.
- 59. (Original) The method of claim 58, wherein said cell is a plant cell.
- 60. (Original) The method of claim 59, wherein said plant cell is monocotyledonous.
- 61. (Original) The method of claim 59, wherein said plant cell is dicotyledonous.
